DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 drawn to a pharmaceutical composition, classified in class 514, subclass 25, 36, 249 and 430 for example.
- II. Claims 6-8 drawn to a process for preparing a hydrophilic N-linked glycosyl prodrug compound, classified in class 536, subclass 4 and 6 for example.
- III. Claims 9-40 and 42 drawn to a method for treating a neurological dysfunction in a subject, classified in class 514, subclass 25, 36, 249 and 430 for example.
- IV. Claim 41 drawn to a method for improving the aqueous solubility and
 blood brain barrier penetrability of a drug, classified in class 514, subclass
 25, 36, 249 and 430 for example.

Inventions Group I; and III-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, for example, L-dopa may be used a method for treating a neurological dysfunction.

Art Unit: 1617

Inventions Group II; and I, III-IV are unrelated to each other. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions are separate and distinct each from the other because they have different functions. The invention of Group I is drawn to a pharmaceutical composition. The invention of Group II functions to prepare a hydrophilic N-linked glycosyl prodrug compound. The invention of Group III functions to treat a neurological dysfunction. The invention Group IV functions to improve the aqueous solubility and blood brain barrier penetrability of a drug. Therefore, they have different functions.

Each invention above relates to a separate and distinct area of pharmaceutical technology. The search for all inventions would place an undue burden on the Office in view of the diversity in the field of search for each.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Election of Species

This application contains claims directed to the following patentably distinct species of the claimed invention: hydrophilic N-linked glycosyl prodrug compounds formula I and IV. See, e.g., claims 3 and 9-10.

Application/Control Number: 09/547,501

Art Unit: 1617

Applicant is required under 35 U.S.C. 121 to <u>elect a composition comprising a</u> <u>specified individual hydrophilic N-linked glycosyl compound</u> for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claims 1-42 are generic to a plurality of disclosed patentably distinct species. The claims read on the employment of various compounds with great diversity of chemical structure classified across class 514, the search for all of which presents an undue burden on the Office. It is noted that a reference to one individual agent would not be a reference to another individual agent under 35 U.S.C.103.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Page 5

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because the above restriction/election requirement is complex, a telephone call to applicant's agent to request an oral election was not made. See M.P.E.P Sec. 812.01.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Jiang, whose telephone number is (703) 305-1008. The examiner can normally be reached on Monday-Friday from 9:00 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Minna Moezie, J.D., can be reached on (703) 308-4612. The fax phone number for the organization where this application or proceeding is assigned is (703) 308-4556.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-1235.
